SIZE CHART

The following size charts are a general guide to product sizing when garments are marked, small, medium, large and so on, Each type and style of garment, depending on which layer it is, will have an appropriate ease allowance built into it to enable it to be worn over/ under other layers. This may vary from manufacturer to manufacturer.

SAFETY BOOT RATING EXPLAINED

There's a clear system in place to gauge the level of protection offered by safety footwear. You've probably heard the term "S3 safety boots" before. It sounds more complex than it is. Here's a breakdown of the safety boot/shoe rating used in the UK.

SB

TOE PROTECTION

The basic safety standard for footwear. These have toe protection against a 200-joule impact. They may also have additional safety features which will be shown via other symbols. For example, if you see SB-P this means that the safety footwear also has the additional feature of Penetration Resistance of the Midsole.

S1

ANTISTATIC, OIL-RESISTANT & ENERGY ABSORPTION

On top of the basic toe protection, S1 ensures the footwear has antistatic protection, is resistant to fuel oil and has energy absorption in the heel. Again other symbols can be added, such as S1-P as above.

S2

PREVENTS WATER PENETRATION

S2 has all the same as S1, plus the added protection of preventing water penetration and absorption of the upper.

S3

MIDSOLE PENETRATION RESISTANCE

S3 safety footwear encompasses all the same levels of protection as S2, plus midsole penetration resistance.

S4

LEAK-PROOF

All the protection offered by S1 but with an entirely moulded polymer/ rubber (e.g. Wellington Boots) making them waterproof and leak-proof.

S5

LEAK-PROOF WITH MIDSOLE PENETRATION RESISTANCE

All the same features of S4 footwear with the added benefit of midsole penetration resistance.

STANDARDS FOR NON-SLIP SHOES

SRA

TESTED ON CERAMIC TILE WETTED WITH SODIUM LAURYL SULPHATE (A DILUTED SOAP SOLUTION)

SRB

TESTED ON STEEL WITH GLYCEROL

SRC

TESTED UNDER SRA AND SRB CONDITIONS

WHAT IS EN343

EN343 is a European Standard for protective clothing that outlines a minimum level of protection against wet weather.

Items are assessed on two criteria; the first **(X)** judges its ability to protect against water penetration, while the second **(Y)** measures breathability in those conditions. They are then rated from one to three in these categories:

(X) WATER PENETRATION RESISTANCE		(Y) BREATHABILITY	
1	Minimum level of rain protection	1	Not classified as breathable under EN343
2	Intermediate rain protection	2	Intermediate level of breathability
3	Highest level of rain protection	3	Highest level of breathability

This rating is included on the CE label inside the garment, where the EN343 mark will be followed by two numbers.

WHAT ARE EN ISO 20345:2011 & EN 20345:2022

EN ISO 20345:2011 OVERVIEW

EN ISO 20345:2011 specifies basic and additional (optional) requirements for safety footwear. This standard ensures that footwear offers protection against various workplace hazards.

Key Features

Toe protection against a 200-joule impact.

Standards for slip resistance, anti-static properties, water resistance, and energy absorption in the heel.

Applicable Abbreviations

SB

Basic safety requirements

S1

SB + closed seat region, antistatic, energy absorption in heel

S1P

S1 + penetration resistance

S2

S1 + water penetration and absorption

S3

EN ISO 20345:2022 OVERVIEW

EN ISO 20345:2022 updates the previous standard to include new requirements and testing methods for improved safety and performance of protective footwear.

Key Features

Enhanced slip resistance requirements.

New testing methods for puncture resistance.

Updated criteria for ergonomic features.
